ECE634 Independent Study:
Battery SOC/SOH estimation algorithm implementation

We are looking for highly motivated senior undergrad and graduate students with different software skills to work on the battery SOC/SOH estimation algorithm implementation project. The goal of this project is to implement the algorithm on the microcontroller, including Raspberry Pi 3 and Beaglebone Black (BBB), using Python and/or C language.
Interested students with both the following skills are encouraged to apply:

- **Software/Programming Skills**
    - **C, embedded C**
    - **Python**
- **MATLAB/Simulink**

If interested, please fill in the survey form:
